Table 3 Stepwise regression analysis of patient knowledge of dispensed drugs[a]					
Variable	Unstandardized coefficient		Standardized coefficient	t-value	P-value
	B	SE	Beta		
(Constant)	1.790	0.099	−	18.080	< 0.001
Total pharmacist interaction score	0.426	0.035	0.82	12.006	< 0.001
Consultation time	0.067	0.022	0.21	3.055	0.005

[a]Total patient knowledge of dispensed drugs analysed against total pharmacist interaction score, total dispensing time, dispensing consultation time, floor space of waiting area and height of dispensing counter. Correlation coefficient of multiple regression equation was 0.945; only parameters with $P < 0.05$ were accepted.

SE = standard error.
