

Table 1 Baseline characteristics of study subjects who progressed to tuberculosis (TB) disease and those who did not: comparison of tuberculin skin test (TST) and QuantiFERON® interferon-gamma release assay (QTB)

TB disease status/test	+ve test			-ve test		
	No.	Mean (SD) age	Sex ratio (F/M)	No.	Mean (SD) age	Sex ratio (F/M)
<i>Progressive (n = 10)</i>						
TST	3	4.8 (3.1)	2/1	7	3.5 (2.8)	5/2
QTB	10	5.4 (3.3)	7/3	0	-	-
<i>Non-progressive (n = 49)</i>						
TST	5	13.4 (6.7)	2/3	43	7.5 (6.6)	25/17
QTB	8	11.3 (7.3)	5/3	41	7.4 (6.5)	22/18

Sex was missing for 1 case (1/49) and TST was missing for another (1/49).

N = total number of cases; n = number of cases; SD = standard deviation; F = female; M = male.
