

Table 6 Predictors of maternal mortality: results of multivariate logistic regression analysis

Variable	B	P-value	OR	95% CI
Age	0.025	0.729	1.03	0.89-1.18
Low level of education	0.361	0.397	1.44	0.26-7.99
Short inter-pregnancy interval	-	0.303	0.98	0.95-1.02
Presence of co-morbid condition/s	-0.603	0.397	0.55	0.14-2.21
Postpartum haemorrhage	-	0.746	0.75	0.13-4.24
Severe pre-eclampsia	-	0.030*	0.14	0.02-0.83
Sepsis	3.480	< 0.001*	32.61	8.73-121.77
Attending < 4 antenatal visits	0.182	0.843	0.83	0.19-4.03
Delivery by caesarean section	-	0.851	0.84	0.14-5.02
Multiple organ dysfunction	1.370	0.009*	3.94	1.39-11.08
Model chi-squared (P)		72.295 (< 0.001*)		
Constant (P)		91.404 (0.007*)		

>*Statistically significant at $P \leq 0.05$.

B = regression coefficient, OR = odds ratio, CI = confidence intervals.
