

Table 2 Maternal age and parental consanguinity among Down syndrome (DS) patients with and without congenital heart diseases (CHDs)

Variable	DS patients with CHDs (<i>n</i> = 110)	<i>P</i> -value	DS patients without CHDs (<i>n</i> = 66)	<i>P</i> -value
	No. (%)		No. (%)	
<i>Maternal age group (years)</i>				
19–24	10 (9)	0.19	9 (14)	0.25
25–29	10 (9)		4 (6)	
30–34	19 (17)		7 (11)	
35–39	22 (20)		17 (26)	
40–49	49 (44)		29 (44)	
<i>Consanguinity degree</i>				
First degree	8 (7)	0.12	6 (9)	0.25
Second degree	5 (5)	0.10	6 (9)	0.24
None	97 (88)		54 (82)	

Statistical significance at *P* < 0.05.
