

Table 2 Multivariable ordinal regression analyses of the socioeconomic predictors of the degree of the anxiety in 5041 participants

Variable	β coefficient	P value	95% Confidence Interval
Sex			
Male (Ref)	0.47	<0.01	0.34 0.59
Female	-0.27	<0.01	-0.33 -0.20
Marital status			
Single (Ref)			
Married	-0.07	0.94	-0.17 0.16
Widowed	-0.43	0.23	-1.14 0.27
Divorced	0.2	0.27	-0.15 0.55
Employed			
Public employee	-0.05	0.057	-0.23 0.13
Private employee	0.08	0.36	-0.09 0.25
Self-employed	-0.01	0.92	-0.23 0.20
Students	0.13	0.23	-0.08 0.34
Unemployed	-0.14	0.28	-0.38 0.11
Income*			
<500 (Ref)			
501-1000	-0.30	<0.01	-0.44 -0.16
1001-1500	-0.39	<0.01	-0.58 -0.19
1501-2000	-0.31	<0.01	-0.54 -0.09
>2000	-0.52	<0.01	-0.71 -0.33
Number of households	0.04	0.04	0.00 0.07
Social network**	-0.17	<0.01	-0.22 -0.13
Social support***	-0.28	<0.01	-0.32 -0.23

*Monthly income in Jordanian Dinar (JD); JD1 = US\$ 1.41

** How many close people do you have?

*** How many people do you have to talk with when you are under stress?
