

Table 5 Factors associated with admission of the first-born twin to the neonatal intensive care unit: logistic regression analysis

Variable	B	P-value	OR (95% CI)
<i>Pregnancy-induced hypertension</i>	0.021	0.975	1.02 (0.28–3.71)
<i>Gestational age (weeks)</i>			
≥ 33 (reference)			1.00
< 33	4.556	< 0.001	95.24 (20.81–435.87)
<i>Twin pregnancy group</i>			
Spontaneous (reference)			1.00
Assisted reproduction technology	1.599	0.004	4.94 (1.68–14.52)
<i>Antepartum haemorrhage</i>	1.370	0.226	3.93 (0.42–36.14)

OR: odds ratio; CI: confidence interval.
