

**Table 2 Bivariate analysis of COVID-19-related characteristics and transmission context**

| Characteristic                                    | Never had COVID-19<br>(n = 963; 86.1%) | Ever had COVID-19<br>(n = 156; 13.9%) | P-value |
|---|--|---------------------------------------|---------|
|   | No. (%)                                | No. (%)                               |         |
| <i>Ever had a contact with a COVID-19 patient</i> |  |                                       |         |
| No known contact                                  | 629 (65.32)                            | 36 (23.08)                            | < 0.001 |
| Maybe/probably                                    | 153 (15.89)                            | 33 (21.15)                            |         |
| Yes, known contact                                | 181 (18.79)                            | 87 (55.77)                            |         |
|   | <b>Mean (SD)</b>                       | <b>Mean (SD)</b>                      |         |
| COVID-19 knowledge                                | 8.01 (2.50)                            | 9.02 (1.46)                           | < 0.001 |
| Preventive behaviour                              | 28.21 (5.93)                           | 28.37 (5.67)                          | 0.759   |
| Risky behaviour                                   | 9.83 (8.29)                            | 8.29 (7.87)                           | 0.024   |
| Fear of COVID-19                                  | 18.60 (6.59)                           | 17.26 (5.74)                          | 0.009   |
| Trust that COVID-19 will be controlled one day    | 6.52 (2.91)                            | 5.53 (2.94)                           | 0.007   |
