

**Table 4 Association of sociodemographic variables with suicidal thought, multiple logistic regression among currently married women (n = 2243)**

Independent variables	Suicidal thought		
	$\beta$	OR (95% CI)	P value
<b>Age groups, years</b>			
15-24	1.36	3.90 (2.39-6.38)	<0.001
25-34		1.0	
>35	0.04	1.0 (0.56-1.76)	0.990
<b>Duration of marriage, years</b>			
<5		1.0	
$\leq 5$	0.60	1.06 (0.55-2.03)	0.857
<b>Annual household income (self-reported)</b>			
Sufficient		1.0	
Insufficient	1.23	1.65 (1.15-2.94)	0.024
<b>Exposure to domestic violence during childhood</b>			
No		1.0	
Yes	1.30	3.65 (2.47-5.38)	<0.001
<b>Recent exposure to domestic violence</b>			
No		1.0	
Yes	1.60	4.96 (3.38-7.28)	<0.001
<b>Having mental health problems<sup>a</sup></b>			
No		1.0	
Yes	1.66	5.26 (3.28-8.42)	<0.001

<sup>a</sup>Including stress, anxiety, and depression. OR = odds ratio; CI = confidence interval.
