

**Table 3 Univariate logistic regressions for the pregnant collective with pre-eclampsia as the dependent variable predicted by vascular endothelial growth factor (VEGF) and endostatin**

<b>Model</b>	<b><math>\beta</math></b>	<b>SE</b>	<b>P-value</b>	<b>OR</b>	<b>95% CI for OR</b>
<i>Normal pregnancy versus pre-eclamptic pregnancy</i>					
VEGF (ng/mL)	0.43	0.18	0.01	1.54	1.08–2.19
Endostatin (ng/mL)	0.22	0.05	<0.001	1.24	1.13–1.37
<i>Mild versus severe pre-eclampsia</i>					
VEGF (ng/mL)	0.07	0.01	< 0.001	1.07	1.03–1.11
Endostatin (ng/mL)	0.08	0.02	0.003	1.09	1.03–1.15

*SE = standard error; OR = odds ratio; CI = confidence interval.*

*\*P < 0.05 was significant.*
