

Table 3 Final multivariate logistic regression analysis of risk factors for HCV–HIV coinfection among HIV-infected individuals, Shiraz, 2011

Variable	Adjusted OR (95% CI)	SE	P-value
Intravenous drug use	7.2 (4.9–10.6)	0.197	< 0.0001
Imprisonment	6.9 (4.6–10.4)	0.21	< 0.0001
Tattooing inside prison	2.6 (1.4–4.8)	0.311	0.002
Tattooing outside prison	2.0 (1.3–3.1)	0.681	0.002
Age ^a	1.0 (1.0–1.04)	0.009	0.05

^aWith each year increase in age.

OR = odds ratio; CI = confidence interval; SE = standard error.
