## IMPORTANT DEFINITIONS

### Who can take the Pfizer-BioNTech COVID-19 vaccine?

According to SAGE (WHO's Strategic Group of Experts on Immunization), the Pfizer-BioNTech COVID-19 mRNA vaccine is safe and effective. Nevertheless, there are specific populations for whom vaccination is not recommended for a variety of reasons. These populations currently include people with a history of severe allergies, (particularly it is contraindicated for People with a history of severe allergic reaction to any component of the vaccine), most pregnant women (except for those with unavoidable high risk of exposure such as health workers), international travellers who are not part of a prioritized group (due to limited supplies of the vaccine at present), and children under 16 (due to lack of data). Further studies are needed for immune-compromized persons. The priority is to start vaccinating health workers at high risk of exposure, followed by older adults, before immunizing the rest of the population. For more details see the link above.

## IMPORTANT CONTACTS

- **The National Focal Person is Dr Buthaina AlMudhaf, Assistant Undersecretary, Ministry of Health, email: AlMudhaf@gmail.com**

Number of New Cases

Total Number of Cases

Number of New Deaths
