

Iran (Islamic Republic of) Primary Health Care Vital Signs Profile

\$ FINANCING

NHA (2017)

PHC spending:

Prioritization of PHC:

Overall health spending¹

38% on PHC

Government health spending²

26% on PHC

Sources of PHC spending:

CAPACITY

Primary Health Care Progression Model⁴

Governance

Inputs

Population Health & Facility Management

PERFORMANCE

Access Index⁵

Utilization Health Survey (2015)

Quality Index⁵

Service Coverage Index

2018 Regional core indicators booklet, 2019 UHC Global Monitoring Report, MOHME (Deputy for Public Health) 2017

EQUITY

Access: % with perceived barriers due to cost, by wealth quintile

Coverage of RMNCH⁶ services, by mother's education

Outcomes: Under-five mortality⁷, by residence

MOHME (Deputy for Public Health) 2017

COUNTRY CONTEXT AT-A-GLANCE

GDP per capita

(PPP int'l dollars)
WDI (2017)

\$14,536

Living in poverty

(Under \$1.90 int'l dollars / day)
WDI (2018)

0.3%

Government health spending as % of GDP⁸

WHO GHED (2017)

4%

Life expectancy at birth

(Years) WHO (2016)

76

Maternal mortality⁹

(Per 100,000 live births)
WHO est. (2017)

16

Neonatal mortality

(Per 1,000 live births)
WHO est. (2018)

9

Premature NCD mortality¹⁰

(Probability)
WHO est. (2016)

15%

Causes of death

WHO est. (2016)

Note: Indicator values presented here may differ from country data sources due to the use of standardized categories and methods to enhance international comparability. See Indicator Description Sheet for details.

Note: Scores for the Capacity, Performance, and Equity domains are color-coded to reflect good (green), medium (yellow), and poor (red) performance, where comparable data are available. Cut-offs can be found in the Indicator Description Sheet. Scores based on data from non-comparable sources are colored gray. Finance indicators are not color-coded because these indicators lack common targets.

Note: The country has requested suppression of indicators related to family planning

1. Current PHC expenditure as % of Current Health Expenditure (CHE)
2. Domestic general government PHC expenditure as % of domestic general government health expenditure
3. Domestic general government PHC expenditure as % of current PHC expenditure
4. The PHC Progression Model uses mixed methods to assess foundational capacities of PHC on a scale from 1 (low) to 4 (high)
5. Because different data/indicators are used in each country, composite index values may not be comparable across countries. See page 2 for the specific indicators used in this VSP.

6. The composite coverage index is a weighted score reflecting coverage of eight RMNCH interventions along the continuum of care (http://www.who.int/gho/health_equity/report_2015/en/)
7. Deaths of children before age 5, per 1,000 live births
8. Domestic general government health expenditure as % of gross domestic product (GDP)
9. National value is 17.7, source: MOH&ME (National Maternal Mortality Surveillance System, 2018)
10. Probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory disease
11. Communicable, maternal, perinatal, and nutritional conditions

Children under 5 with diarrhea receiving ORS	85%		Regional core indicators booklet	2018

Non-Communicable Diseases (NCDs)				
% of population with normal blood pressure***	60%		UHC Global Monitoring Report	2019

+CRD not available in HMIS data used, excluded from the calculation.*Indicators where lower values are preferable were transformed before inclusion in the index. The modified indicator was defined as 100-X, where X is the original percentage shown in this table. **Country-specific (proxy) indicator, used in absence of globally comparable survey data. ***Percentage of adult population with normal blood pressure is based on age-standardized estimates. These distributions are rescaled to provide finer resolution before inclusion in the index. Rescaled indicator = (X-50)/(100-50)*100, where X is the prevalence of normal blood pressure. For more details see Tracking UHC: 2017 Global Monitoring Report. Note: Summary scores for the domains of Access, Quality, and Coverage are calculated by taking the average of indicator values within each subdomain, and then taking the average across subdomain scores.
