

85.788 Screened Childre (0 - 59 months) in Se

Screened Children (Under 6 months)

GAM (WHZ) (6 - 59 months)

49% Stunting (6 - 59 months)

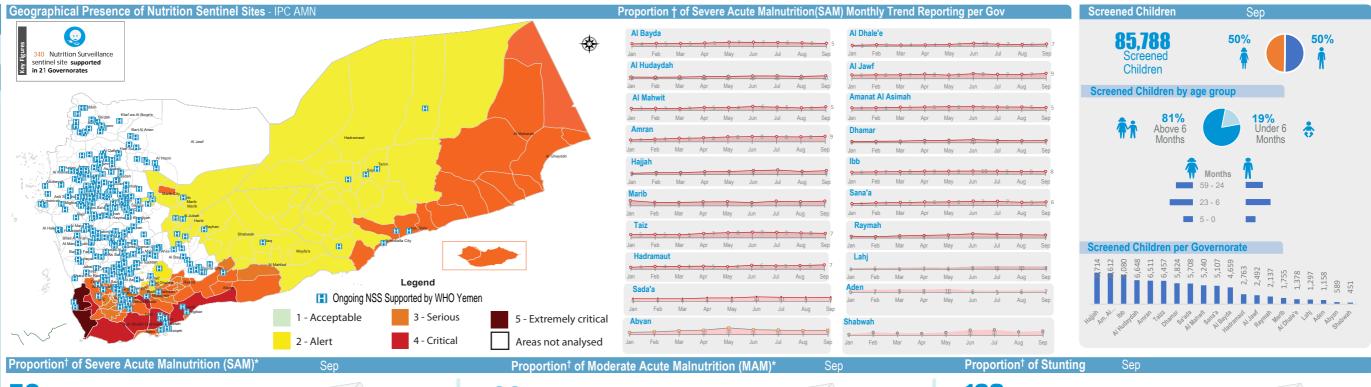

21% Anemia (6 - 59 months)

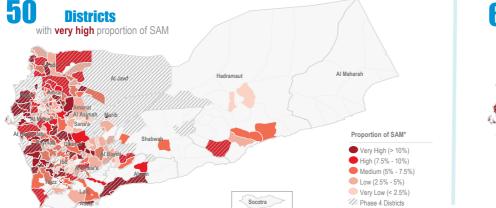

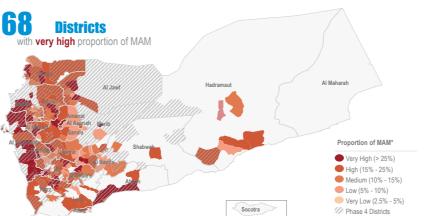

52% Underwight (0 - 59 months)

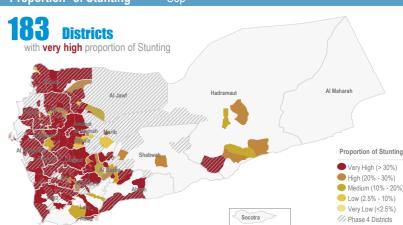

Exclusive Breastfeeding (0 - 6 months)

## **Objectives of the Yemen Nutrition Surveillance System**

Monitor children nutritional status, early detection of malnutrition and case referral. Share information and trigger alert verification..

## Methodology

Nutritional assessment in NSS is normally performed through the measurement of child's weigh, height/length, MUAC, age, hemoglobin level, breastfeeding status and oedema. It is Facility-based surveillance system, established mainly in district hospitals across the country.

The system provides proportion of children under five years found suffering from any forms of malnutrition, out of the total children screened. It is not a formal survey using sampling methods to produce representative results.

The results only reflect the status of children who have attended the health facility in the month under review. The system tracks Global core nutrition indicators: Stunting, Wasting, Exclusive breastfeeding and Anemia. This bulletin is based on reports received by the health facility surveillance MoPHP teams\*.

WHO supports the MoPHP and constantly works to expand coverage and improve data quality, funded by World Bank.

Additional screening of 34,229 children via mobile teams and pediatric wards integrated with TFC to ensure assessment of children in remote areas is conducted with ensuring to refer children with malnutrition forms to the nearest nutrition services to continue receiving treatment and follow up

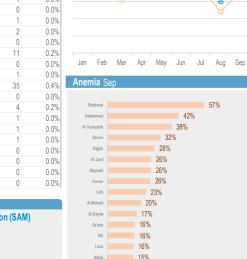

Proportion of Oedema per month

Summary for Nutrition Indicators Sep 2024 in Reporting Gov

**YEMEN: Nutrition Surveillance** 

				Ac	Acute Malnutrition by Z- Score				Acute Malnutriton by MUAC				Underweight		Stunting		Exclusive Breastfeeding		Anemia		Oedema
