

Screened Children 2021

596,154

Key Figures Nov 2021

64,083

Screened Children (0 - 59 months) in Nov

22%

Screened Children (Under 6 months)

24%

GAM (WHZ) (6 - 59 months)

48%

Stunting (6 - 59 months)

20%

Anemia (6 - 59 months)

46%

Underweight (0 - 59 months)

14%

Exclusive Breastfeeding (0 - 6 months)

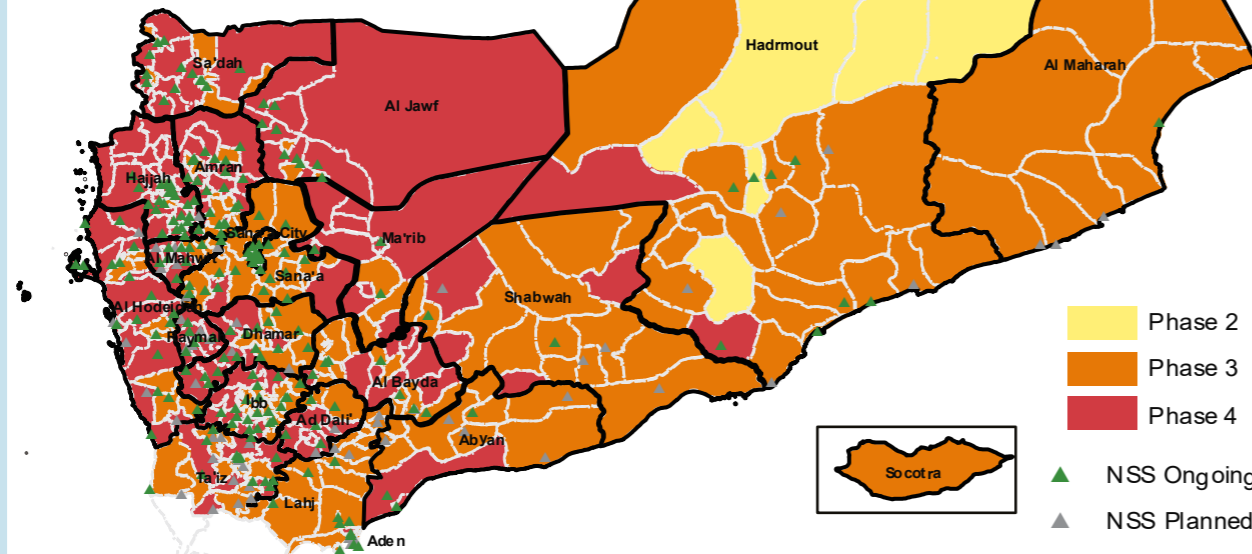

Geographical Presence of Nutrition Sentinel Sites

21 of 22 Governorates with Ongoing NSS

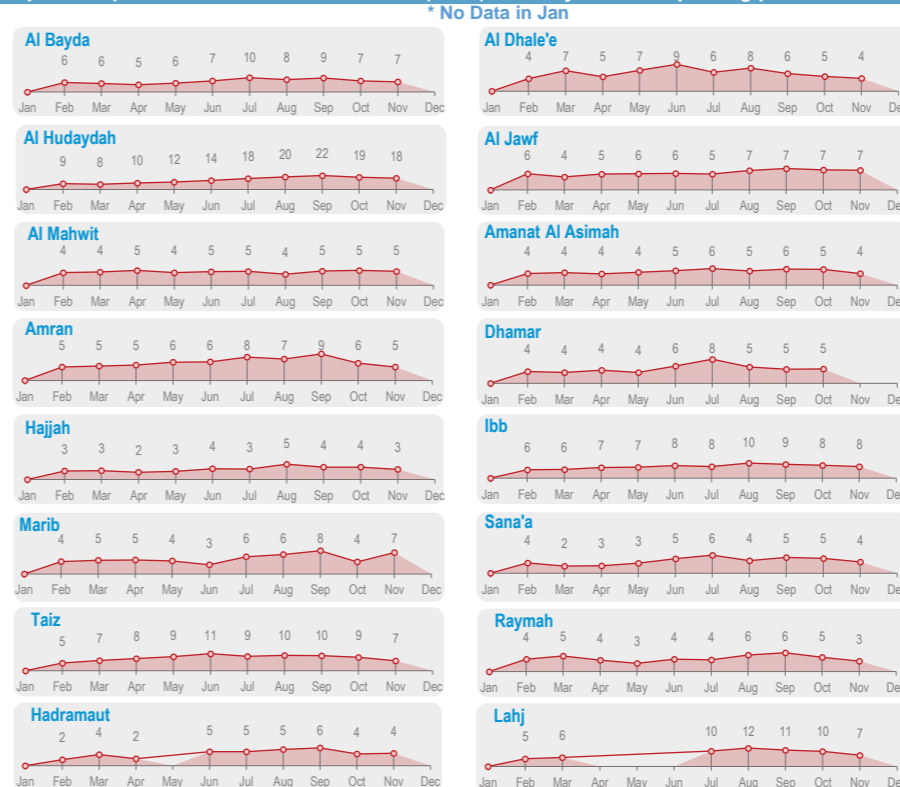

247 Ongoing NSS

- 1 District in Phase 2 out of 6
- 126 Districts in Phase 3 out of 173
- 112 Districts in Phase 4 out of 154

Proportion † of Severe Acute Malnutrition (SAM) Monthly Trend Reporting per Gov

Screened Children Nov

64,083 Screened Children

Screened Children by age group

Screened Children per Governorate

Proportion † of Severe Acute Malnutrition (SAM)\* Nov

22 Districts with very high proportion of SAM

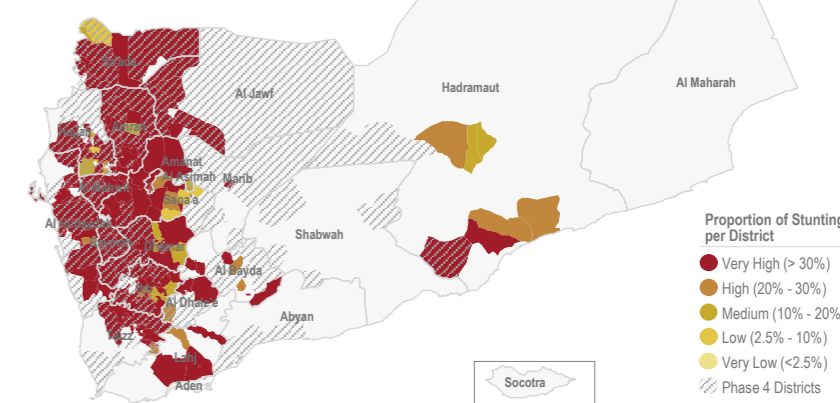

Proportion † of Moderate Acute Malnutrition (MAM)\* Nov

41 Districts with very high proportion of MAM

Proportion † of Stunting Nov

154 Districts with very high proportion of Stunting

Objectives of the Yemen Nutrition Surveillance System

Monitor children nutritional status, early detection of malnutrition and case referral. Share information and trigger alert verification.

Ensuring the continuity and safety of services:

Nutritional assessment in NSS is normally performed through the measurement of child's weigh, height/length, MUAC, age, hemoglobin level, breastfeeding status and oedema. Because of COVID-19 to mitigate the risk of cross infection, adapted protocol have been put in place to ensure safe screening services. Some indicators, e.g. acute malnutrition by WHZ and stunting, were temporarily excluded from the set of measurements, as an interim measure to control the spread of infection, although the use of anthropometric tools is safe after sanitization\*. Currently, although some sites are still following these operating procedures, most of the sentinel sites have resumed the assessment of all indicators.

Methodology

Facility-based surveillance system, established mainly in district hospitals across the country. The system provides proportion of children under five years found suffering from any forms of malnutrition, out of the total children screened. It is not a formal survey using sampling methods to produce representative results. The results only reflect the status of children who have attended the health facility in the month under review. The system tracks Global core nutrition indicators: Stunting, Wasting, Exclusive breastfeeding and Anemia. This bulletin is based on reports received by the health facility surveillance MoPHP teams\*. WHO supports the MoPHP and constantly works to expand coverage and improve data quality, funded by World Bank.

\*The bulletin based on accepted reporting data which reflects on the presence of governorates in dashboard.  
\*\*WHO-UNICEF Implementation Guidance for the Prevention, Early Detection and Treatment of Wasting in Children 0-59 Months Through National Health Systems in the Context of COVID-19.  
SOP for nutritional screening in Nutrition Surveillance Sites established in health facilities (Hospitals and PHC), in line with COVID19 preventive measures

Summary for Nutrition Indicators Nov 2021 in Reporting Gov

Governorate	# of Screened Children (0 - 5)	# of Screened Children (6 - 59)	Proportion of GAM (0 - 5)	Acute Malnutrition by Z- Score				Acute Malnutrition by MUAC				Underweight		Stunting		Exclusive Breastfeeding		Anemia		Oedema	
				# of MAM	Proportion of MAM	# of SAM	Proportion of SAM	# of MAM	Proportion of MAM	# of SAM	Proportion of SAM	# of Underweight	Proportion of Under weight	# of Stunting	Proportion of Stunting	# of EBF	Proportion of EBF (Yes)	# of Anemia	Proportion of Anemia	# of Oedema	Proportion of Oedema
Al Bayda	244	1,392	16.4%	239	17%	94	7%	189	14%	74	5%	727	44%	561	40%	107	37%	16	4%	1	0.1%
